Patent No. 5877293

GENERAL INFORMATION:
APPLICANT: ADDIR, John Robert
APPLICANT: BODMER, Mark William
APPLICANT: BODMER, Mark William
APPLICANT: OWENS, Raymond John
TITLE OF INVENTION: CDR Grafted Anti-CEA Antibodies and
TITLE OF INVENTION: Their Production
CORRESPONDENCE ADDRESS:
ADDRESSE: ADDRESSE:
ADDRESSE: Foley & Lardner
STREET: 3000 K Street, N.W., Suite 500
CITY: Washington, D.C.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 88, Application US/09144886
Patent No. US20020155114A1
GENERAL INFORMATION:
APPLICANT: Marks, James D
APPLICANT: Amersdorfer, Peter
TITLE OF INVENTION: Therapeutic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: 1996-1110 Monoclonal Antibodies That Neutralize
FILE REFERENCE: 1998-08-31
NUMBER OF SEQ ID NOS: 98
SCOTWARR: PatentIn Ver. 2.0
SEQ ID NO 88
               APPLICANT: Zhu, Zhenping
APPLICANT: Witte, Larry
TITLE OF INVENTION: Antibodies Specific to KDR and Uses Thereof

Sequence 9, Application US/09910059

Patent No. US20020142359A1

GENERAL INFORMATION:

APPLICANT: Copley, Clive G

APPLICANT: Edge, Michael Derek

TITLE OF INVENTION: Monoclonal Antibody to CEA, Conjugates Comprising Said Antibody,

TITLE OF INVENTION: Their Therepeutic use in an Adept System

FILE REFERENCE: 1991-209

CURRENT APPLICATION NUMBER: US/09/910,059

CURRENT FILING DATE: 1090-23

PRIOR APPLICATION NUMBER: CB 9703103.3

PRIOR FILING DATE: 1997-04-29

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

PRIOR FILING DATE: 1997-02-14

SPIOR FILING DATE: 1996-05-04

NUMBER: OF SEQ ID NOS: 131

SOFTWARE: Patentin version 3.1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 89, Application US/09144886
Patent No. US20030155114A1
GENERAL INFORMATION:
GENERAL INFORMATION:
THEORY INVENTION: Therespectic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: Therespectic Monoclonal Antibodies That Neutralize
TITLE OF INVENTION: Detailinum Neurotoxins
FILE REFERENCE: 2500.117USO
CURRENT APPLICATION NUMBER: US/09/144,886
CURRENT PILING DATE: 1998-08-31
NUMBER OF SEQ ID NOS: 98
SEQ ID NOS: 98
SEQ ID NO 89
LENGTH: 112

                                                                           The invention relates to a monoclonal antibody (MAb) to lipoteichoic acid of gram positive bacteria, where the MAb is a chimeric immunoglobulin comprising at least part of a human immunoglobulin constant region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The artibodies bind to whole bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic or peptides (encoded by a DNA of the variable region of anti-lipoteichoic corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial. They can also be used for the diagnosis of gram positive bacterial infections. The present sequence represents a specifically claimed lipoteichoic acid epitope peptide minic that can be bound by the antibody of the invention (Mab 96-110).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Monoclonal antibody; MAb; lipoteichoic acid; gram positive; bacteria; immunoglobulin; phagocytosis; infection; epitope; peptide mimic;

killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipotacicolic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacterial. They can also be used for the diagnosis of gram positive bacterial infections. Sequences AAW94726-34 represent common peptide sequences resulting from all library panning experiments. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a monoclonal antibody (MAD) to lipoteichoic acid of gram positive bacteria, where the MAD is a chimeric immunoglobulin comprising at least part of a human immunoglobulin comprising at least part of a human immunoglobulin variable region and at least part of a non-human immunoglobulin variable region having specificity to lipoteichoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance phagovytosis and killing of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Monoclonal antibody; MAb; lipoteichoic acid; gram positive; bacteria; immunoglobulin; phagocytosis; infection; epitope; peptide mimic; Mab 96-110; panning.

The multipodies bind to whole bacteria and enhance phagocytosis and antibodies or peptides (encoded by a DNA of the variable region of antilpodies or peptides (encoded by a DNA of the variable region of antilpodies or peptides (encoded by a DNA of the variable region of antilpodies or acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRS) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacterial infections. Sequences AAW94705-22 represent sequences resulting from a limer library panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                           ;

acid of gram positive bacteria, where the MAD is a chimeric constant region and at least part of a non-human immunoglobulin constant region and at least part of a non-human immunoglobulin constant region and at least part of a non-human immunoglobulin variable region having specificity to lipotechnoic acid of gram positive bacteria. The antibodies bind to whole bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipotechnoic acid antibody or characterised by amino acids anti-lipotechnoic acid antibody or characterised by amino acids (CDRS) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacteria. They can also be used for the diagnosis of gram positive bacteria. Infections.

Sequences AAM4705-22 represent sequences resulting from a 15mer library panning second experiment. Three sequences resulting from a 15mer library conducted to identify peptide sequences to which antibody of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    provide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Monoclonal antibody; MAb; lipoteichoic acid; gram positive; bacteria;
                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 15mer2-10/0 resulting from 15mer library panning experiment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New antibodies to lipoteichoic acid of gram positive bacteria - used to develop products for the diagnosis, prevention and treatment of infections caused by gram positive bacteria
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a monoclonal antibody (MAb) to lipoteichoic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             invention (Mab 96-110) bound strongly. The antibodies bind to whole bacteria and enhance protection from lethal infection. The filling of the bacteria and enhance protection from lethal infection. The antibodies or peptides (encoded by a DNA of the variable region of anti-lipoteichoic acid antibody or characterised by amino acids corresponding to one or more of the complementarity determining regions (CDRs) of the variable region of the antibody) can be used for treating or preventing infections caused by gram positive bacterial infections. Sequences AAW94705-22 represent sequences resulting from a 15mer library canducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide invention acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Monoclonal antibody; MAb; lipoteichoic acid; gram positive; bacteria; immunoglobulin; phagocytosis; infection; epitope; peptide mimic; Mab 96-110; panning.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 15mer2-16/0 resulting from 15mer library panning experiment.

The invention relates to a monoclonal antibody (MAb) to lipoteichoic
acid of gram positive bacteria, where the MAb is a chimeric
immunoglobulin comprising at least part of a human immunoglobulin
constant region and at least part of a non-human immunoglobulin
constant region and at least part of a non-human immunoglobulin variable
credion having specificity to lipoteichoic acid of gram positive bacteria.
The antibodies bind to whole bacteria and enhance phagocytosis and
contained by a proceed of the variable region of
anti-lipoteichoic acid antibody or characterised by amino acids
corresponding to one or more of the complementarity determining regions
corresponding to one or more of the antibody can be used for treating
creating infections caused by gram positive bacteria. They can also
be used for the diagnosis of gram positive bacterial infections.
Sequences AAM44705-22 represent sequences resulting from a library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                panning second experiment. Three series of panning experiments were conducted to identify peptide sequences to which antibody of the invention (Mab 96-110) bound strongly. The translated sequences provide lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to a monoclonal antibody (MAb) to lipoteichoic
acid of gram positive bacteria, where the MAb is a chimeric
immunoglobulin comprising at least part of a human immunoglobulin
constant region and at least part of a non-human immunoglobulin variable
region having specificity to lipoteichoic acid of gram positive bacteria.

CC The antibodies bind to whole bacteria and enhance phagocytosis and
c xilling of the bacteria and enhance protection from lethal infection. The
antibodies or peptides (encoded by a DNA of the variable region of
anti-lipoteichoic acid antibody or characterised by amino acids
ccresponding to one or more of the antibody) can be used for treating
cc preventing infections caused by gram positive bacteria. They can also
be used for the diagnosis of gram positive bacteria. They can also
cs be used for the diagnosis of gram positive bacteria. Infections
conducted experiment. Three series of panning experiments were
cc panning second experiment. Three series of panning experiments were
cc conducted to identify peptide sequences to which antibody of the
invention (Mab 96-110) bound strongly. The translated sequences provide
cc lipoteichoic acid epitope peptide mimics to which Mab96-110 bound.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

Porphorymonas gingivalis (PC) polypeptide sequences given in AAY34318 to AAY34583. AAX91802 to AAX41989 represent PCR primers used in the isolation of the PC polypeptides. The PC polypeptides have antibacterial activity with a vaccine mechanism of action. The PC polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps

The invention relates to human polynucleotides (AA179941-AA193841) and the encoded proteins (AA000010-AA013910) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activinhibin activity and may be useful in the diagnosis and/or treatment of cancer, leukaemia, nervous system disorders, arthritis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                              Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signalling and cell-cell interactions \cdot

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Porphorymonas gingivalis (PG) polypeptide sequences given in AAY34318 to AAY34381. AAX91802 to AAX91989 represent PCR primers used in the isolation of the PG polypeptides. The PG polypeptides have antibacterial activity with a vaccine mechanism of action. The PG polypeptides can be used as vaccines especially against Porphorymonas gingivalis. Probes can be used to detect Porphorymonas gingivalis in standard hybridisation assays. Porphorymonas gingivalis is involved in periodontal disease especially gingivitis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Human; cytokine; cell proliferation; cell differentiation; gene therapy; vaccine; peptide therapy; stem cell growth factor; haematopoiesis; tissue growth factor; immunomodulatory; cancer; leukaemia; nervous system disorders; arthritis; inflammation.

                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                             g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                              The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL16175) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention describes the a polypeptide comprising one or more consensus regions of proteins of LIV-1 family or its functional homologue. The polypeptide is useful in the preparation of a medicament for the treating a disease e.g. those involving disorders of zinc homeostasis, in gene therapy and for modifying apoptosis in vitro or in vivo on contact with cells. Diseases involving defects in zinc homeostasis include cancer, neurodegenerative disorders and apoptotic disorders. Recombinant proteins of the LIV-1 family (an
                                                                                                                                                                                                                                                              The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             LIV-1; oestrogen; cytostatic; neuroprotective; zinc homeostasis; gene therapy; apoptosis modulator; cancer; neurodegenerative disorder; apoptotic disorder; zinc-homeostasis related disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Use of a polypeptide comprising one or more consensus regions of proteins of LIV-1 family for treating disorders of zinc homeostasis such as breast cancer, neurodegenerative disorders, and for modifying

The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by P. acnes. The disorders include SAPHO syndrome (synovitis, acne, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acne vulgarias. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SAPHO syndrome: synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endophthalmitis; bone; joint; central nervous system; ELISA. inflammatory lesion; acne vulgaris; enzyme linked immunosorbent assay; dermatological; osteopathic; neuroprotectant.
oestrogen-regulated gene) are useful for diagnosing a zinc homeostasis-related condition in a subject which involves contacting a sample from the subject with the recombinant protein and measuring the binding of antibody to the sample. The antibody is also useful for treating a zinc homeostasis-related condition. This sequence is a member of the LIV:1 family (a gene regulated by oestrogen levels) and is useful for creating recombinant proteins for diagnosing zinc-homeostasis related conditions, described in the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   polypeptides and nucleic acids useful for diagnosing infections, especially useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      polypeptides. The proteins and their associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused by a cares. The disorders include SAPHO syndrome (synovitis, acre, pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis. P. acnes is also involved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acre vulgaris. A method for detecting the presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequences AAU39105-AAU68017 represent Propionibacterium acnes immunogenic
polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

ö
polypeptides may be used as antigens in the production of antibodies specific for P. acnes proteins. These antibodies can be used to downregulate expression and activity of P. acnes polypeptides and therefore treat P. acnes infections. The antibodies may also be used as diagnostic agents for determining P. acnes presence, for example, by enzyme linked immunosorbent assay (ELISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at tp.wipo.int/pub/published_pct_sequences.

STRAIN=White leghorn: TISSUE-Spleen;
STRAIN=White leghorn: TISSUE-Spleen;
Submitted (JUN-1999) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: Cytokine that binds to TNFRSF5. Mediates B-cell proliferation in the absence of co-stimulus as well as IgE production in the presence of IL-4. Involved in immunoglobulin class switching (By similarity).
-!- SUBUNIT: Homotimer (By similarity).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SUBCELLULAR LOCATION: Type II membrane protein. Also exists as extracellular soluble form (By similarity). PTM: The soluble form derives from the membrane form by protecultic processing (By similarity).
SUBUNIT: ASSOCIATES WITH CDK9 TO FORM P-TEFB. CYCLIN T1 IS THE PREDOMINANT CYCLIN ASSOCIATED WITH CDK9.
SUBGELLULAR LOCATION: Nuclear (By similarity).
SIMILARITY: BELONGS TO THE CYCLIN FAMILY. STRONG TO CYCLIN C
                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

Potentiates CASP-8-mediated apoptosis. Activates NF-kappaB (By similarity). SUBUNIT: Binds to CFLAR/CLARP and CASPI via their CARD domains. Binds to BIRG3/c-1AR1 and BIRC3/c-1AR2, TRAFI, TRAF2, TRAF5 and TRAF6. May be a component of both the TNFRSFIA and TNRFSF5/CD40 subcellular Location. Cytoplasmic (Probable). FIW: Autophosphorylated (By similarity). SIMILARITY: BELONGS TO THE SER/THR FAMILY OF PROTEIN KINASES.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

Extremophiles 3:227-233(1999)

-:- CATALYIC ACTIVITY: UTP + alpha-D-galactose 1-phosphate = diphosphate + UDP-galactose.

-:- PATHWAY: Galactose metabolism; second step.

-:- SUBCELLUIAR LOCATION: Cytoplasmic (Potential).

-:- SIMILARITY: BELONGS TO THE GALACTOSE-1-PHOSPHATE URIDXLXLTRANSFERASE FAMILX 2.
                                                                                                                                                                                                                                                                                                                                                                                              PROSITE; PS01163; GAL_P_UDP_TRANSF_II; 1.
